

Git Commands Documentation

Project: Post Your Work on GitHub

This document lists the Git commands used to create the repository structure, branches, commits, and .gitignore file for the bikeshare project.

Git Commands Documentation - Post Your Work on GitHub

A. Create a new folder for the project and move into it
mkdir bikeshare-project
cd bikeshare-project

B. Initialize a Git repository
git init

C. Add the main Python file and README file
git add bikeshare.py README.md

D. Commit the first version of the project
git commit -m "Add bikeshare project files"

E. Rename the default branch to main
git branch -M main

F. Connect the local repository to GitHub
git remote add origin https://github.com/YOUR-USERNAME/YOUR-REPOSITORY-NAME.git

G. Push the main branch to GitHub
git push -u origin main

H. Create and switch to the documentation branch
git checkout -b documentation

I. Update README.md with project details, files used, instructions, and credits
git add README.md
git commit -m "Update project documentation"
git push -u origin documentation

J. Return to the main branch
git checkout main

K. Create and switch to the refactoring branch
git checkout -b refactoring

L. Refactor bikeshare.py to improve readability and structure
git add bikeshare.py
git commit -m "Refactor bikeshare code"
git push -u origin refactoring

M. Return to the main branch
git checkout main

N. Create the .gitignore file to prevent CSV files from being pushed
echo "*.csv" > .gitignore

git add .gitignore
git commit -m "Add gitignore for CSV files"
git push origin main

O. Check local branches
`git branch`

P. Check remote branches
`git branch -r`

Q. Check commit history
`git log --oneline --all --decorate`
